DuPont Color Retrieval Process

How to Retrieve a Formula from ColorNet®

Now that you have customized your software and added your data, you are ready to retrieve a formula. The **Search** tab in CATFRAMS contains various methods to search for a paint formula or product, depending on your available information. The following procedures explain how to use the **Car/Code/Year** search.

How

- 1) Click **CATFRAMS**  on the ColorNet® toolbar. The **Search/Car/Code/Year** tab appears
- 2) Select the **Manufacturer** from the drop-down list OR type the manufacturer abbreviation. The list at the bottom of the tab displays all of the manufacturer's records.
- 3) Type the manufacturer code, (**Mfr Code**) if you know it. Mark the **Partial Code** box on the far right side of the screen if you do not know the complete code. Again, the list displays the corresponding records.
- 4) Click the **Year** arrows to select the vehicle's year.
- 5) Select the appropriate **Appl-Type** (application type), for example Exterior, from the drop-down list, and press **[Enter]**.
- 6) Double-click the stock code for the formula that you want to retrieve. If available, the Alternates tab appears.
- 7) To use VINdicator™, click . (Note: If the VINdicator™ button is grayed-out, no data is available.)
- 8) From the VINdicator™ window, type your 17 character VIN number and click OK. Your formula is displayed. If VIN support is available your formula will be identified with an alternate prefix of VI.

Note: Please consult your ColorNet® online help  for more information.
