

DuPont Automotive Finishes

Surface Preparation Overview

DuPont 225S™ Aluminum Refinishing System Step A, Aluminum Metal Cleaner

An acidic metal cleaner and conditioner formulated for aluminum. DuPont 225S™ effectively removes corrosion resulting from weathering and prepares the surface for the use of DuPont 226S™ Aluminum Refinishing System Step B, Conversion Coating.

DuPont 226S™ Aluminum Refinishing System Step B, Aluminum Conversion Coating

DuPont 226S™ was developed for use on aircraft, boats, commercial and other vehicles exposed to severe conditions. DuPont 226S™ chemically stabilizes aluminum, producing a high degree of corrosion resistance and adhesion for paint systems.

Plas-Stick® Plastic-Prep 2319S™ and Plas-Stick® 2320S™ /A-2320S™ Plastics Cleaners

See Plastics section for Plastic/Flexible Parts Repair Systems.

DuPont First Klean 3900S™

A fast-dry surface cleaner designed to speed initial surface preparation prior to sanding or bodywork. DuPont First Klean 3900S™ removes wax, grease, silicone, dirt, tar, insect remnants, road film and pin stripe adhesives.

DuPont Final Klean 3901S™

A fast-dry surface cleaner designed to speed final surface preparation prior to painting. DuPont Final Klean 3901S™ removes sanding sludge, dust, fingerprints and small amounts of grease and oil.

DuPont Low VOC Final Klean 3909S™

An ultra-low VOC (0.5 lbs/gal), multi-purpose surface cleaner designed to speed final surface preparation prior to painting. DuPont Low VOC Final Klean 3909S™ removes sanding sludge, grease smears, dirt and compound sludge.

DuPont™ Prep-Sol® 3919S™ Cleaning Solvent

Designed for initial surface preparation before painting to remove wax, grease, silicone, dirt, tar, insect remnants, road film and pin stripe adhesives.

DuPont 3939S™ Lacquer and Enamel Cleaner

Designed to remove sanding sludge prior to painting. DuPont 3939S™ also removes dust, fingerprints and small amounts of grease and oil.

DuPont Kwik Clean 3949S™

A low-VOC waterborne surface cleaner for use prior to sanding. DuPont Kwik Clean 3949S™ removes dirt, tree sap, insect remnants and salt/road film.

DuPont Sontara® PS39X5S™ Pre-Saturated Static Control Wipes

A versatile pre-saturated wipe which reduces static charge, minimizes the attraction of dirt, and cleans surfaces thoroughly to lower the risk of paint defects.

DuPont 5717S™ Metal Conditioner

An acidic concentrate for the cleaning and conditioning of ferrous (iron-containing) metals before painting. 5717S™ effectively removes rust and corrosion, inhibits the formation of rust under paint and etches the metal to improve adhesion.

DuPont 5718S™, Steel and Galvanized Refinishing System Conversion Coating

A non-flammable, phosphoric, acid-based conversion coating which produces a uniform zinc phosphate coating on steel and galvanized steel surfaces. The zinc phosphate coating formed on the metal surface offers the best possible substrate for paint system adhesion and corrosion resistance.

Caution: Do not use solvent-based cleaners (i.e., DuPont First Klean 3900S™, DuPont Final Klean 3901S™, Prep-Sol® 3919S™ or DuPont 3939S™ Lacquer & Enamel Cleaner) on unprimed plastic or fiberglass substrates. The simple rubbing action when cleaning unprimed plastic can quickly generate static electricity build-up. This can very easily result in a static discharge and a flash fire.
